

# Lobster Mushroom

*Hypomyces lactifluorum*

**Characteristics:** orange cap and stem ; partially hidden gills ; up to 30 cm in diameter ; white easily breakable flesh

**Season:** abundant Aug.-Oct.

**Location:** associated with coniferous and deciduous trees

**Remark:** parasite of short stemmed russula. No look a likes.

# Short stemmed russula

*Russula brevipes*

The mushroom is bad whit out it's parasit; confused whit the deceiving milkcap, also mediocre
